

TelDig Nexus™

Centralized Data Access for Asset Management & Field Work

Would you like to electronically send your work orders to excavators, automate their billing and connect them to the damage prevention call center(s) all centrally tracked and logged?

TelDig Nexus™ ...

...is a series of software modules with a central database providing an electronic environment and virtual data access connecting all parties involved in your network assets for repairs, damage investigations, maintenance, extensions...

...provides a software environment to your contractors, sending them an electronic work order, automating billing while connecting to the relevant damage prevention call centers.

Would you like to concentrate all data related to field work in a central database providing controlled access to all relevant parties?

What are the benefits?

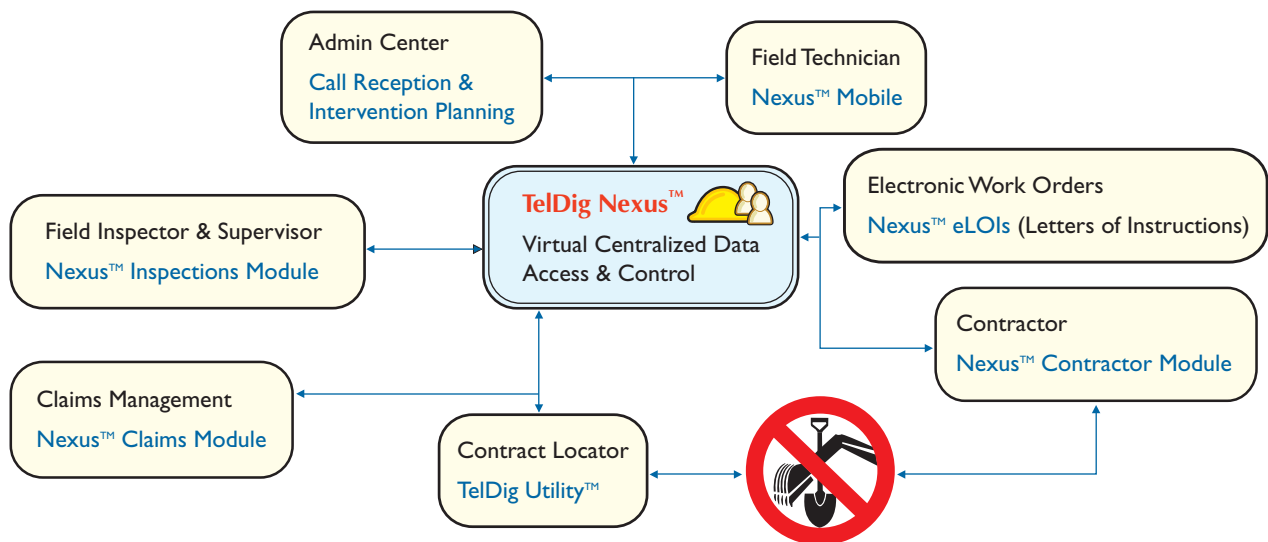

- **More Efficient Claims Management**
- **Better Damage Investigations & Reduced Damages**
- **Better Use of Excavators & Internal Resources**
- **Better Tools for Inspectors & Supervisors**

...facilitates claims management, damage investigations, provides software tools to field technicians, inspectors and supervisors.

...interfaces with existing systems, such as:

- **Work Force Management**
- **One Call Centers**
- **Collection**
- **Payables**
- **ERP & CRM Software**

With total control on your network assets, TelDig Nexus™ looks beyond damage prevention by putting it all together
